

EWBiz Service strives to reduce administrative costs by using state-of-the-art software. We are fond of Auto-Entry an automation program designed to both eliminate manually entering transactions as well as reducing human error. This program uses AI (artificial intelligence) and OCR (optical character recognition).

The solution works by capturing and analyzing scanned and photographed paper documents, including bank and credit card statements, bills, invoices, receipts, and more, accurately automating this information into QuickBooks® Online and desktop software.

Auto-entry allows you to upload all bills (even bills with multiple pages) provide detailed line-item break-down and sync to QB online. The bills will be linked to vendors, customers, and chart of accounts. The program has an auto-import program and saves all the bills in easily accessible on-line filing system

EWBizservice's goal is to improve your administrative work-flow. Auto-Entry is one of several tools we use to help you improve your process.
